

FAST ROAD Mitsubishi Evo VI > X

(Complete with chassis set up data)

SPECIFICATION

This precise system allows the use of a softer spring than normal, giving the tyres an easier life. The damper gives improved roll control and a big increase in mechanical grip from the tyres.

Designed to give a range of adjustments that transforms the handling of the everyday road car to a tight track day car.

- Adjustable ride height gives optimum weight distribution
- Adjustable damper sharpens up change of direction, 40 clicks of adjustment
- **Now available in stainless steel with increased camber adjustment**

SUSPENSION UNITS (including springs) per car set

EVO X	FM8002A	£1,575.00
EVO VII > IX	FM7001A	£1,575.00
EVO VI	FM07-974/FM7001A	£1,660.00

Note: Each set comes with a chassis set up and drivers pack

EXE-TC TOP MOUNTS SPECIFICATION

Manufactured from 7075 aircraft alloy, incorporating an adjustable eccentric (front) and non adjustable (rear) high performance spherical bearing.

Resulting in a more precise change of direction and greater control over caster and camber.

EXE-TC TOP MOUNTS (spherical bearing type) each

EVO Front X	RM08-950	£158.75
EVO Front VII > IX	RM04-950	£158.75
EVO Rear X	RM08-951	£102.50
EVO Rear VII > IX	RM04-951	£102.50
